PRECISION AGRONOMY

SOIL MAPPING

Know your field below the surface.

EM Mapping

It all starts with the soil.

EM mapping is a reliable way to evaluate the variations of soil texture & soil salinity that could impact yield across the field.

● IDENTIFY ● ESTABLISH ● COLLABORATE

Identify problem areas across fields so our team of skilled agronomists can help you prevent the unexpected.

Establish management zones for effective variable rate applications of inputs (lime, fertilizers, seed, irrigation, etc.)

Collaborate with accurate data from a team of veteran operators dedicated to delivering quality service & teaming with you to provide solid management decisions.
