PRECISION AGRONOMY

MANAGEMENT ZONES

Optimize inputs & reduce cost on the farm.

Using Field Zones

Most of us recognize areas within fields that grow and respond differently to fertilizer, seed, water, and pesticides. By grouping areas within a field that have similar characteristics into management zones we allow for more efficient application of inputs.

Three Benefits of using Management Zone

- Placement of inputs where they are most effective.
- Limit input cost on unresponsive areas
- Improved productivity through proper fertility placement
